

NORDIC PLATFORM PRESENTS: THE NEW SPACEFILLER!

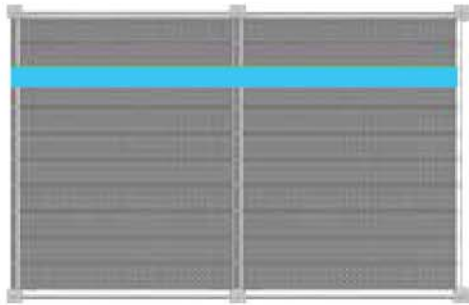

The new scaffold spacefiller, is designed to close the gap that occurs on scaffolding between the platforms. The new spacefiller of Nordic Platforms is produced in PP (Polypropylene). Some of the major advantages of PP is the low weight and high strength. The weight is on **ONLY 1 kg per meter**. The product is extremely easy to install and can be locked with ease. In addition, we are able to customize the product to your requirements. Since the spacefiller is produced in a PP-material, it can easily be shaped as desired. It is possible to drill holes in the material and modify the length with a standard saw.

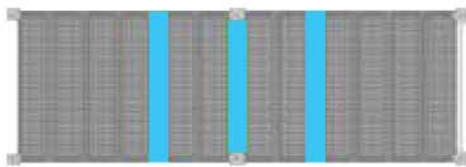

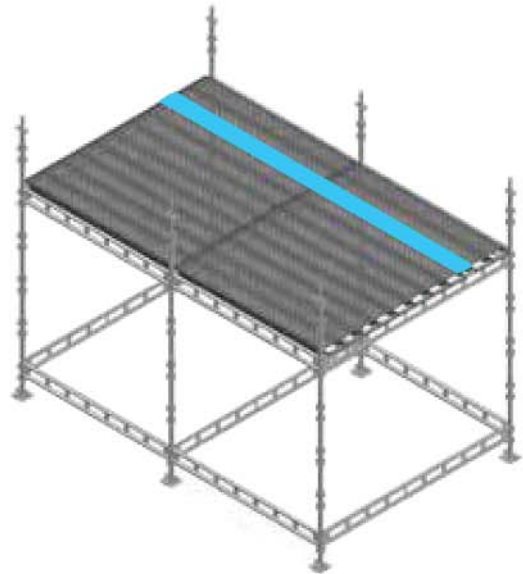

The new spacefiller is, besides being the lightest on the market, also incredibly strong, inexpensive and can be produced in all colors and lengths.

LIGHTEST SPACEFILLER ON THE MARKET!

The Spacefiller close the gap that occurs on scaffolding between the platforms.

The space-filler is IPS-protected according to EN PCT.
